MAXIMUM ALLOWABLE GALLONS

3. b. If a reasonable unaccounted for water loss was expressly determined in the utility's last general rate case then the maximum allowable gallons is calculated as follows:

TOTAL GALLONS SOLD ÷ (100% - percentage of unaccounted water loss found reasonable) =	
---	--

3. c. No unaccounted for water loss was expressly determined in the utility's last rate case and the actual unaccounted for water loss exceeds 15% then the maximum allowable gallons is calculated as follows:

TOTAL GALLONS SOLD ÷ (0.85) =	
-------------------------------	--

3. d. No unaccounted for water loss was expressly determined in the utility's last rate case and the actual unaccounted for water loss is less than 15% then the actual gallons of water purchased is used:

ENTER ACTUAL GALLONS PURCHASED	
--------------------------------	--

4. Total gallons sold for the 12 month period	
---	--

5. Increased water cost	
-------------------------	--

The increased water cost is the cost difference between Maximum Allowable Purchases at base (current rate) and purchases at new rate.

6. Purchased water adjustment factor*

*The purchased water adjustment factor is obtained by dividing the increased cost of water by the total gallons sold. (Number 5 ÷ (Number 4 ÷ 1,000))

Note: The purchased water adjustment factor is added to each thousand gallons sold. If the minimum usage is 2,000 gallons then the purchased water adjustment factor would be added to the minimum bill twice.

7. Revised tariff sheets must be attached showing the rate to be charged by the utility and the effective date of the increased rates.

8. Proposed effective date
