First Revised Sheet No. 1

Canceling P.S.C. No. 1

Original Sheet No. 1 & 2

Wholesale Power Rate Schedule

AVAILABILITY

Available to all cooperative associations which are or shall be members of the Seller. The electric power and energy furnished hereunder shall be separately metered for each point of delivery.

MONTHLY RATE - PER SUBSTATION OR METERING POINT

Substation Charge

\$100 per month for each energized substation. In the event of joint utilization, this charge shall be divided equally.

Demand Charge

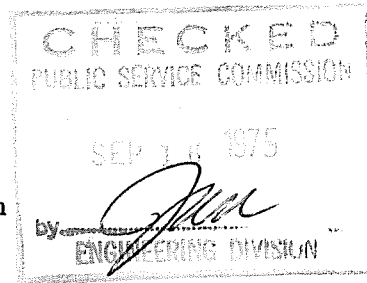

\$1.34 per KW of billing demand

Energy Charge

First 300,000 kwh @ 5.7 mills per kwh
Next 400,000 kwh @ 5.0 mills per kwh
Excess of 700,000 kwh @ 4.4 mills per kwh

Minimum Monthly Charge

The minimum monthly charge under the above rate shall not be less than \$100 to each member for each energized substation (metering point)

Original Sheet No. 1 & 2

Wholesale Power Rate Schedule

BILLING DEMAND

The billing demand is the arithmetical sum of the maximum kilowatt demands measured (and adjusted for power factor as provided below) at all points of delivery. The maximum kilowatt demand at each point of delivery shall be the highest average rate at which energy is used during any fifteen consecutive minute period of the month.

FUEL ADJUSTMENT

All fuel costs properly chargeable from FPC and PSC Account No. 151 (cost of coal and oil used from inventory) will be totaled monthly and all net kwh's produced at each power station also totaled monthly. All monthly kwh purchased and the equivalent fuel cost related thereto will be added to that applicable to kwh's produced.

A weighted average fuel cost of all kwh's produced and purchased will be computed minus 2.31 mills per KWH (the East Kentucky basic rate contains a fuel cost of 21¢ per MBTU which is equivalent to 2.31 mills per kwh). The kwh amount as determined above will be applied to each kwh sold in the immediately succeeding month. (Lag in fuel charge of \$2,624,564 due to change in fuel clause from six months average to monthly basis to be added to this fuel adjustment at the rate of .5 mills per kwh until such lag in fuel charge is recovered.)

POWER FACTOR ADJUSTMENT

7-76

The member cooperative agrees to maintain unity power factor as nearly as practicable at each point of delivery. If the power factor measured at a point of delivery at the time of monthly maximum demand is determined to be less than 80%, the monthly maximum demand measured at that point of delivery shall be adjusted by multiplying the monthly maximum demand by 80% and dividing the product thus obtained by the actual per cent power factor measured at the time of such maximum demand.
